The Digital Identity Blog is now online www.digitalidforum.com/blog

Day One	Day Two
Next Generation Digital Identity. Perhaps one of the reasons why it is so difficult to decide what to do about identity is that we don't understand it: our "gut" concept of identity is just inadequate to explore the real meaning of identity in an online and interconnected world. What does identity actually mean? What does it mean to "steal" it?	The Key Role of Biometric Technology. A thought-provoking examination of the relationship between biometrics and digital identity, looking at the synthesis of technology and business process in real-world identity management systems.
Identity Around the World. As is now traditional we will have a national case study of a real world scheme together with a presentation on new developments in the field of physical identity.	Identity Around The Net. It is time to re-examine the world of online authentication, identity and federation.

The Digital Identity Forum is a not-for-profit event that supports a variety of charities. Last year these were the Pond Meadow School for children with severe disabilities and the Disability Challenge Day Centre for disabled children. The goal of the Forum is to encourage discussion and debate around the real issues around the relationship between real and virtual identities in all their forms. As always, the Forum will be limited to 100 people to foster interaction and the exchange of ideas.

Every Spring we organise the sister event to the Digital Money Forum the annual Digital Money Forum (see the web site at www.digitalmoneyforum.com for more details). Following on from the very successful 2006 Digital Money Forum, the 2006 Digital Identity Forum will see: the introduction of the Digital Identity Pub Quiz at the end of day one, the launch of the Digital Identity Blog in May, more time devoted to expert panels and more prizes and other giveaways for delegates.

This event has been made possible by the generosity of

Royal Mail Group plc

FUJITSU

with the first annual digital identity pub quiz sponsored by

Consult Hyperion is an IT consultancy that specialises in secure electronic transactions, ranging from retail e-payments and online authentication to electronic borders and mass transit.
